

# Special offer: Set of 3 Millimess 1003

## Mechanical Dial Comparator for precision manufacturing

Measure with  $\mu\text{m}$  precision: The Millimess 1003 mechanical dial comparator is a versatile measuring instrument that is virtually indispensable for any mechanical precision manufacturing. Typical measuring tasks include length, flatness, concentricity and comparison measurements, whether in a stand, measuring table or comparison measuring device. The integrated fine adjustment and manually adjustable tolerance marks further simplify setup and measurement. The compact device offers great performance with its unique sensitivity and precision, it also impresses with constant measuring force and long-term precision. In addition, the Millimess 1003 scores with a robust design, especially the special shock protection device, which reliably protects the measuring mechanism against damage and thus ensures unchanging precision.

Set of 3

€ 432,00

OSP € 601,50

### Top-Eigenschaften:

- High sensitivity and precision thanks to measuring mechanism with ball-bearing measuring pin
- Extremely robust and long-term precision thanks to shock-protected measuring mechanism
- Reliable reading of measurement results on high-contrast dial

Order No.	Measuring Range	Readings	Graduation error $G_g$	Reversal span $f_u$	Repeatability $f_w$	Clamping shank
9105612	+/- 50 $\mu\text{m}$	1 $\mu\text{m}$	1 $\mu\text{m}$	0.5 $\mu\text{m}$	0.5 $\mu\text{m}$	8 mm
